

List of the Crayfish species of North Carolina - compiled 2018-04-27

This is a listing of the 48 species (45 native) that have been documented to occur in the freshwater systems of the state. The scientific and common names used in this list are from NatureServe Explorer and Cooper (2010). The list also includes the State Rank, Global Rank, State Status, and U.S. Status (if it has such statuses) for each species. The ranks are those of the Biotics database of the North Carolina Natural Heritage Program and NatureServe, October 2016. State Status of Endangered, Threatened, or Special Concern is assigned by the N.C. Wildlife Resources Commission, whereas the NC NHP provides the Significantly Rare and Watch List status categories. The U.S. Fish and Wildlife Service assigns the U.S. Status categories.
