

List of the Freshwater Fish species of North Carolina - compiled 2019-11-22

This is a listing of the 251 taxa (228 native) that have been documented to occur in the freshwater systems of the state. The scientific and common names used in this list are from the North American Native Fishes Association's Checklist of Freshwater Fishes of North America (2017). The list also includes the State Rank, Global Rank, State Status, and U.S. Status (if it has such statuses) for each species. The ranks are those of the Biotics database of the North Carolina Natural Heritage Program and NatureServe, October 2016. State Status of Endangered, Threatened, or Special Concern is assigned by the N.C. Wildlife Resources Commission, whereas the NC NHP provides the Significantly Rare and Watch List status categories. The U.S. Fish and Wildlife Service assigns the U.S. Status categories. Statuses with legal standing are in caps in the Comments.
