TECHNICAL DESCRIPTION, ADULTS: Forbes (1954); Schmidt and Anweiler (2020)

TECHNICAL DESCRIPTION, IMMATURE STAGES:

ID COMMENTS:

DISTRIBUTION: Seems to be restricted to the mountains, though we have one record from the northwest Piedmont.

FLIGHT COMMENT: Please refer to the flight charts.

HABITAT: Our records come mainly from montane alluvial forests, cove forests, and high elevation forests.

FOOD: Larvae feed primarily on members of the rose family, including apple, cherry, hawthorn, mountain ash, plum, and serviceberry (Wagner et al., 2011); birch and hazel have also been reported. In North Carolina, we have observed this species feeding on apple (*Malus sp.*).

OBSERVATION_METHODS:

NATURAL HERITAGE PROGRAM RANKS: G5 S4S5

STATE PROTECTION: Has no legal protection, although permits are required to collect it on state parks and other public lands.

COMMENTS:
