TECHNICAL DESCRIPTION, IMMATURE STAGES:

ID COMMENTS: This species is smaller (90% of the time) than hesperidago or citromba when comparing males to males, females to females (J.B. Sullivan, pers. obs.) The median line has an even course across the wing rather than an undulating one, as is the case for *hesperidago*. This line arches outward at the costa in this species but arches inward in *citromba*, which also has an even median line.

DISTRIBUTION: Please refer to the dot map.

FLIGHT COMMENT: Please refer to the flight charts.
