-	-	G5

Earliest date: Graham 2016-05-02  
Latest date: Ashe 2003-08-26

**DISTRIBUTION:** Throughout the mountains and Piedmont, and over the western half of the Coastal Plain, barely reaching the counties along the western part of Albemarle Sound.

**ABUNDANCE:** Fairly common, to locally common, over the mountains and Piedmont; uncommon in the Coastal Plain, with but one recent report. More numerous in the mountains than downstate.

**FLIGHT:** Early May to late August in the mountains, and likely so also downstate. However, Piedmont records fall only from mid-May to mid-August, and Coastal Plain records only to mid-July.

**HABITAT:** A variety of lakes and ponds, typically with emergent vegetation.

**COMMENTS:** As with so many of our damselflies, there are few people looking for them in recent years in the Coastal Plain; thus, it is no surprise that there are collection records for about half of these counties, with but a single recent flight date record.
